

1.

```
ALTER TABLE alkatresz ADD ( ar INT CHECK (ar > 0))
```

```
SELECT nev FROM gyarto WHERE adoszam NOT IN (SELECT gyarto  
FROM termek)
```

vagy

```
SELECT nev FROM gyarto g LEFT OUTER JOIN termek t ON  
g.adoszam = t.gyarto) WHERE tkod IS NULL
```

```
UPDATE termek SET ear = 1.1*ear WHERE tkod IN ( SELECT  
termek FROM komponens WHERE alkatresz = (SELECT akod FROM
```

```
alkatresz WHERE nev = 'X'))
```

```
CREATE VIEW et AS SELECT MAX(t.nev) nev, t.tkod, COUNT(*) db  
FROM termek t INNER JOIN egysegek e ON e.aru = t.tkod  
GROUP BY t.tkod
```

és

```
SELECT nev FROM et WHERE db = (SELECT MAX(db) FROM et)
```

2.

```
SELECT tipus, AVG(ar), MAX(ar) - MIN(ar) FROM tanfolyam GROUP BY tipus  
SELECT megnevezes, CASE WHEN ar > 100000 THEN 'drága' ELSE 'olcsó'  
END arkatategoria FROM termek
```

```
CREATE VIEW tdb AS SELECT MAX(t.megnevezes) nev, COUNT (*) db  
FROM tanfolyam t INNER JOIN befizetes b ON b.kurzus = t.tkod GROUP BY  
t.tkod
```

és

```
SELECT nev, CASE WHEN db > 10 THEN 'népszerű' ELSE 'nem népszerű'
```

```
END letszam FROM tdb
```

3.

```
ALTER TABLE termék DROP COLUMN gyarto
```

```
CREATE TABLE gyartja (termek INT REFERENCES termék,  
gyarto INT REFERENCES GYARTO)
```

4.

```
ALTER TABLE termék ADD (kategoria CHAR(50))
```

```
CREATE VIEW kgy AS SELECT g.adoszam, t.kategoria FROM gyarto g LEFT
```

```
OUTER JOIN termék t ON g.adoszam = t.gyarto GROUP BY
```

```
g.adoszam, t.kategoria
```

és

```
CREATE VIEW kgy2 AS SELECT kategoria, COUNT(adoszam) db FROM
```

```
kgy GROUP BY kategoria
```

és

```
SELECT kategoria FROM kgy2 WHERE db = (SELECT COUNT(*) FROM  
gyarto)
```
